X12CrNiMoV12-3, 1.4938 is a high-alloy chromium-nickel-molybdenum steel with the addition of vanadium for carburization with a martensitic structure, which due to high strength properties and significantly increased resistance to oxidation, is used for the production of aviation propellers, especially loaded gears, ball screws, responsible parts working at elevated temperatures such as rotors and turbine blades, bolts in the power industry, pump components as well as coupling parts in aircraft constructions. Unique composition chemical composition ensures high hardenability, great naweglonej layer parameters (hardness, toughness), and a clear reduction in deformations arising during heat treatment.
