High strength stainless steel, steel is currently hot and strong use of more general super 12%Cr stainless steel, mainly used for steam turbine blades, high temperature bolt. It is hot to add more strong elements in 12%Cr steel W, Mo, V, in order to improve the 12%Cr blade steel at room temperature, medium temperature strength and long time; in order to suppress the appearance of ferrite, a corresponding increase in carbon content, and add about 1% to Ni, to balance and improve the strength of martensite matrix effect.
